OVERVIEW

The LeagueRepublic API is a RESTful JSON web API for web developers to process and display data from a LeagueRepublic league in a website or app of their choice outside of LeagueRepublic.

To use this API you will need:

- knowledge of processing JSON data in a web application.
- to have created a league in LeagueRepublic.
- to have taken out a Gold trial or plan for that league.

We also offer Code Snippets which are a simpler way for users to display standings, matches, results and statistics in a website outside of LeagueRepublic. Find out more about these in our Help Centre.
